Linus
Publications, Inc.

We are a publishing house dedicated to providing quality course materials, including textbooks, readers, casebooks, and lab manuals. We also publish books of general interest to the wider reading public.

We offer a range of innovative solutions for your publishing needs. Our adaptive technology allows for last-minute changes that let you control the project at every stage: from design and production, through custom-marketing and distribution.

We feel that working closely together—can help guarantee a book that everyone…will be proud of.

Textbook

Once your manuscript is ready, send it to us. Your book editor reviews the material and works within your timeline. We design the cover while maintaining your own vision for the book. Linus delivers your book in the shortest turnaround time in the industry. Finally, we market your book to other institutions, using our proven marketing techniques.

Case books

Present your case studies, connect them to material from other publications, make your propositions and formulate topics for discussion. We obtain the legal permission from other publishers where necessary. Combine your original work with other material, and join an elite author/editor community.

If you use standard textbooks

Your students may use the majority of a textbook, yet they have no choice but to buy the entire volume. But there are options: you can use the same selected materials from various sources and integrate them into one book that better reflects your own approach to the subject as well as your students' pocketbooks.

A reader or anthology

Think of how many reading assignments and handouts you use in a semester. Assemble them into a textbook and get the recognition as author or editor, for the material you have developed over the years. Collect your paper assignments, review-sheets, teaching material, and we will help you create your reader or anthology, so that students can find all the resources they need in one volume. We will obtain the necessary copyright clearance for all the borrowed material.

Laboratory manual

Your handouts or existing manuals may not be adequate for your current laboratory needs. We offer to rewrite and rearrange them exactly in the way that suits your current equipment and your teaching. Our dedicated artists will custom-illustrate and label your manuals to suit your teaching needs. We will create any required data sheets, tables, and graphics. You decide on the way you'd like the book bound. The result is having a lab manual that truly *represents* you.

Comparable quality and lower price

The price of a Linus book is generally half the price of other comparable textbooks available in the market. Our unique system of prepress and production has impressively lowered the cost. Go through your campus bookstore; find any book on the same topic. We will produce your volume at equal or superior quality and at a far lower price.

"My material is not well-organized and is not yet ready"

Many of our existing authors had the same problem until they met with a Linus editor. They soon realized their material was much closer to publication than they thought. You can give us your material as a pile of photocopies, a well-formatted computer file or even a combination of such, as well as other documents. If this is your first project, get us involved from the early stages.

Preliminary edition

If your book still needs some tinkering, our beta edition will let you test the book as a work in progress for one or two semesters, before settling down with a final version.

Clearance for copyrighted materials

If you need to use material other than yours, we take care of the entire process and resolve the copyright clearance. Our copyright clearance department will obtain clearance for copyrighted material. We negotiate for the lowest fees possible and handle all work necessary to have the borrowed material included in your project.

Cover, layout, durability, and readability

We believe that the cover of the book and the layout of its contents are major factors. Our book designers will work to give your volume a unique look; one you can be proud of and provide any input of your own. You can select any page size, number of illustrations, paper quality or binding technique appropriate to ensure durability. Since shorter lines are easier to read, we recommend that text-only books be done in two columns on a page. Lab manuals look best in a single column with a wide clear margin for students' notes.

Updating your material

With the furious pace of research, you should not have to wait to update your book or lab manual until the publisher is ready. For that reason, we've incorporated a technology that allows for changes virtually every semester.

That little matter of royalties

As an author or editor of a book, you are entitled to royalties. Ours are among the highest in the industry. Royalties can be paid directly to you, to your department or to a scholarship fund; it can be divided among several recipients or as you wish.

Marketing

If yours is a textbook, our marketing and sales staff will develop a plan to market it to other institutions. This often involves campus visits, direct mail, telemarketing, and promotion at professional conferences.

Some final thoughts

There's no need to deliver the finished product to us. We can offer suggestions to help you develop the manuscript into final form: shortcuts, procedures, fresh points-of-view. As a group of authors and businessmen ourselves, we recognize only too well—the fine line between perfection and procrastination. Don't waste any more time. Everyone at Linus is dedicated to producing works we can all be proud of.
